Flexagon Tutorial
Interactive folded structure   Lynne Connolly

time is meaningless
when one day doesn't
reference the other

things given

taken places

life taken

Folding instructions:

1. Use a square piece of paper for example to print on A4 paper use 210x210mm square format.
2. Fold in half, open.
3. Fold sides into middle (gate fold), open.
4. Turn the paper over.
5. Fold paper in half other way.
6. Fold sides to the middle.
7. You will have 16 equal squares made by the folds.
8. Cut out the centre 4 squares

Glue 3 folds
to this square

12. Glue the top right square and then the bottom left square.
13. Fold each side in to meet in the middle gluing down the squares.

Layout for print

You need to layout two sides front and back if you want images to line up once folded. The back of right-hand 2B will meet the blank top left corner of the back. Ensure you feed the paper in the printer the correct way to print double sided – use a test sheet to determine which way to flip the paper.
